**DETAILED ACTION*****Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-33 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-15 of U.S. Patent No. 6,935,329 in view of Gschwind and Pearlman. Gschwind discloses that it is known in the art to use a fan or equivalent thereof (col. 6, lines 39-50 and col. 7, lines 39-45) to cool a heat reflecting and grease collecting unit 11. The grill unit and heat reflecting unit disclosed in claims 1-33 are merely an obvious variation of patented claims. It would have been obvious to one skilled in the art to provide the 6,935,329 device with the fan disclosed in Gschwind, for the reasons set forth in Gschwind.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 13-15, 28 and 29 are rejected under 35 U.S.C. 102(b) as being anticipated by Nishikawa.

There is disclosed in Nishikawa a cooking apparatus comprising: a body 9; a heating unit 23 mounted in the body; a heat reflecting unit 16, including a frame 13, 15 and reflecting plates 16; a cooling fan 21 located in an inner space 17 defined by the frame and reflecting plates.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 16-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nishikawa in view of Pearlman.

Pearlman discloses the use of a thermostat and control unit which monitors the temperature of a cooling fan for its operation based upon temperature.

It would have been obvious to one skilled in the art to provide the apparatus of Nishikawa with the thermostat and control unit disclosed in Pearlman, in order to operate the fan upon the temperature within the apparatus reaching a set amount.

In regards to the temperature being indicative of the reflecting plate temperature, such would be the case since the plates are located within such a close proximity of the heater.

### ***Response to Arguments***

Applicant's arguments filed February 17, 2006 have been fully considered but they are not persuasive. Applicant states that the reflecting shield of Nishikawa is not disclosed as being removable. It should be noted that the shield, if mounted in the case, can be removed from the case in some form. Thus, the reflector is removable some how.
